

# Enterprise Mobility Management

A professionally structured UX case study for managing users, devices, policies, enrollments, geofences and security operations.

|                                                                                                                   |                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Core challenge</b><br>Reduce IT administration complexity while improving security, visibility and compliance. | <b>Primary audience</b><br>Enterprise IT administrators, mobility managers, security teams and employees. |
| <b>Design approach</b><br>Desktop-first enterprise SaaS with strong hierarchy, automation and safe actions.       | <b>Portfolio story</b><br>Users → Groups → Devices → Policies → Geofences → Compliance.                   |

**Portfolio positioning:** Senior / Lead UI/UX Designer case study demonstrating complex workflows, information architecture, interaction design and enterprise usability.

# 01 · Enterprise EMM Case Study

Centralized endpoint administration becomes one operational workspace. The administrator can understand fleet health, investigate risk, take controlled action and verify results.

| Area    | UX focus                                                                                                 |
|---------|----------------------------------------------------------------------------------------------------------|
| Problem | Fragmented tools, large device fleets, policy conflicts and slow incident response.                      |
| Goal    | Give administrators a single source of truth for identity, endpoints, policies, location and compliance. |
| Success | Faster enrollment, faster remediation, fewer errors, higher task success and stronger auditability.      |

Understanding the key users of the Enterprise Mobility Management (EMM) platform helps us design experiences that are efficient, secure and user-centric.

## Arjun Rao

IT Administrator

35 Years Bengaluru, India 2,000+ Employees

### About

Arjun manages the organization's entire device ecosystem. He ensures security, compliance and seamless operations for thousands of devices.

*I need a single platform that gives me complete visibility, control and automates repetitive tasks.*

### Tech Proficiency

High

### Work Tools

### Goals

- Manage devices efficiently at scale
- Maintain security and compliance
- Identify and resolve non-compliance fast
- Automate policy assignment
- Reduce manual IT support

### Pain Points

- Too many devices to manage
- Unclear policy violations
- Complicated enrollment
- Fragmented visibility
- Delayed security alerts

### Needs

- Centralized dashboard & reports
- Bulk actions & automation
- Advanced filters & search
- Real-time alerts & insights
- Easy policy & compliance management

### Behaviors

- Works primarily on desktop
- Checks dashboard multiple times/day
- Uses filters and bulk actions
- Responds to security alerts
- Reviews compliance reports

### Role

IT Administrator

### Department

IT Operations

### Experience

10+ Years

### Mindset

Problem Solver

### Focus

Security, Compliance & Efficiency

## Priya Sharma

Employee / End User

29 Years Mumbai, India Sales Manager

### About

Priya uses her company device to work on the go. She needs secure access to apps and data without complex technical steps.

*I just want to do my work without worrying about security rules and device restrictions.*

### Tech Proficiency

Medium

### Preferred Devices

### Goals

- Quick and easy device enrollment
- Access corporate apps securely
- Stay productive on the move
- Understand security requirements
- Minimal interruptions

### Pain Points

- Long and confusing setup
- Complex security rules
- Unexpected restrictions
- Poor error messages
- Lack of transparency

### Needs

- Simple and guided enrollment
- Clear instructions
- Minimal user interaction
- Helpful error messages
- Transparency on policies

### Behaviors

- Uses mobile and laptop
- Needs quick resolutions
- Prefers self-service
- Rarely contacts IT
- Works remotely & on-site

### Role

Sales Manager

### Department

Sales

### Experience

5+ Years

### Mindset

Efficiency Seeker

### Focus

Productivity & Simplicity

### Key Takeaway

Arjun needs power, visibility and control over complex enterprise environments.

Priya needs simplicity, clarity and a seamless experience to stay productive.

### Our Goal

Design a unified EMM platform that balances enterprise control with user simplicity.

# Empathy Map

Understanding the IT Administrator to design experiences that build confidence and simplify complex device management decisions.

## Says

- “ Show me what needs attention.”
- “ Which policy caused this?”
- “ Can I resolve this for many devices?”
- “ I need a clear view before I take action.”
- “ Help me understand the impact of this action.”

## Thinks

- Is this device really at risk?
- Will policies conflict?
- What will this action affect?
- Will this fix the issue?
- How can I prevent this in the future?

## Does

- Filters devices to find issues quickly
- Checks alerts and notifications
- Assigns and updates policies
- Reviews compliance and audit logs
- Performs remote actions (lock, wipe, sync)
- Validates changes and monitors results

### IT Administrator

Manages and secures thousands of devices

## Feels

- Time pressure during security incidents
- Cautious before destructive actions
- Overwhelmed by too many devices
- Relieved when issues are resolved
- Confident when the UI is clear and helpful

## Key Insight

The administrator needs **confidence** before action. Status should be paired with cause, scope, impact and next best action.

Cause  
Why is this happening?

Scope  
Which users/  
devices affected?

Impact  
What is the  
business impact?

Next Best Action  
What should I  
do next?

## 03 · Empathy Map

### Says

"Show me what needs attention." "Which policy caused this?" "Can I resolve this for many devices?"

### Thinks

"Is this device really at risk?" "Will policies conflict?" "What will this action affect?"

### Does

Filters devices, checks alerts, assigns policies, reviews compliance, performs remote actions and audits changes.

### Feels

Time pressure during incidents; cautious before destructive actions; confident when the UI explains cause and impact.

Key insight: the administrator needs **confidence before action**. Status should be paired with cause, scope, impact and next best action.

## 04 · Information Architecture

| Navigation          | Key content                                            |
|---------------------|--------------------------------------------------------|
| Dashboard           | KPIs · compliance · alerts · recent activity           |
| Users               | All users · groups · roles · user detail               |
| Devices             | All devices · groups · compliance · remote actions     |
| Enrollments         | Pending · completed · failed · enrollment methods      |
| Policies            | Security · device · application · network · compliance |
| Geofences           | Map · active · inactive · location rules               |
| Applications        | Required · blocked · managed applications              |
| Reports             | Device · compliance · enrollment · policy              |
| Alerts / Audit Logs | Security alerts · activity history · audit trail       |
| Settings            | Organization · integrations · permissions              |

# Information Architecture

A scalable structure that organizes complex mobility management capabilities into clear, intuitive and actionable sections.

| <div>  EMM Platform         </div> <div>  Dashboard         </div> <div>  Users         </div> <div>  Devices         </div> <div>  Enrollments         </div> <div>  Policies         </div> <div>  Geofences         </div> <div>  Applications         </div> <div>  Reports         </div> <div>  Alerts / Audit Logs         </div> <div>  Settings         </div> | Navigation                                                                                                | Key content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Flow Principles

### Clear Steps

Each step is simple, focused and actionable.

### Visibility

Show progress and current status.

### Feedback

Give immediate system responses.

### Safety

Confirm destructive or high-impact actions.

### Traceability

Maintain audit trail and activity history.

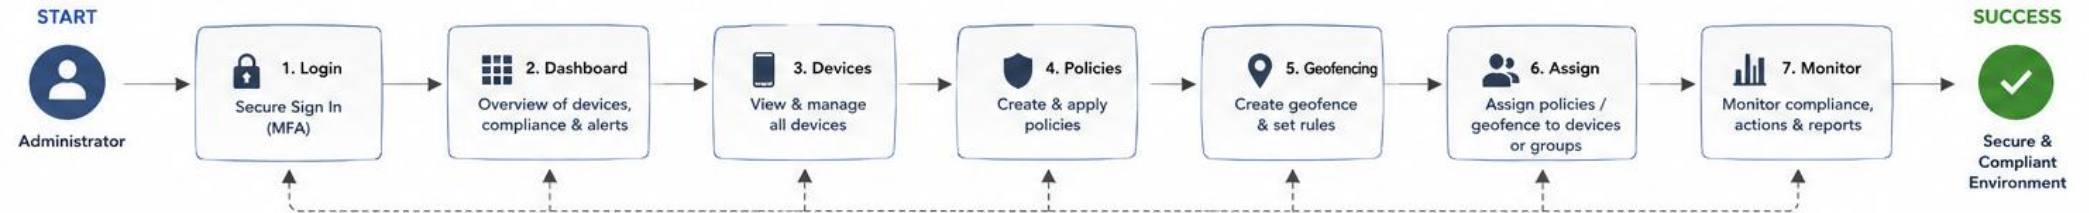

## 07 · Task Flows

| Task            | Flow                                                                                  |
|-----------------|---------------------------------------------------------------------------------------|

## EMM APPLICATION – USER FLOW (Administrator Journey)

Goal: Securely manage enterprise devices, apply policies and monitor compliance.

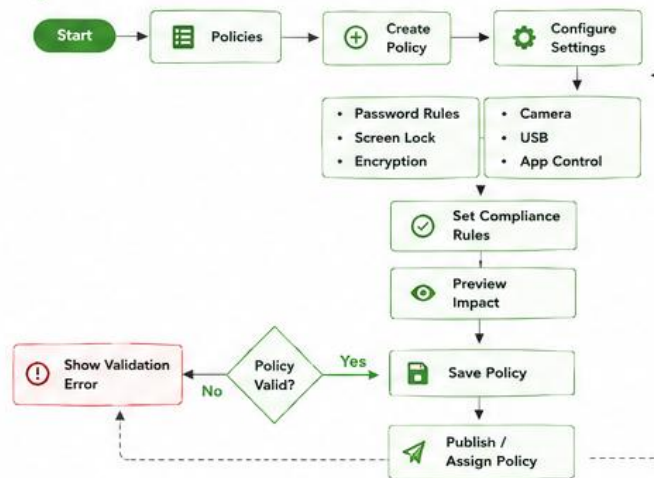

### KEY TASK FLOWS (Step-by-Step)

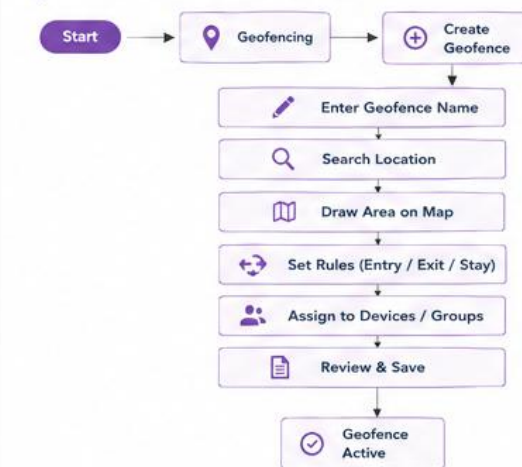

#### TASK FLOW 1: DEVICE ENROLLMENT

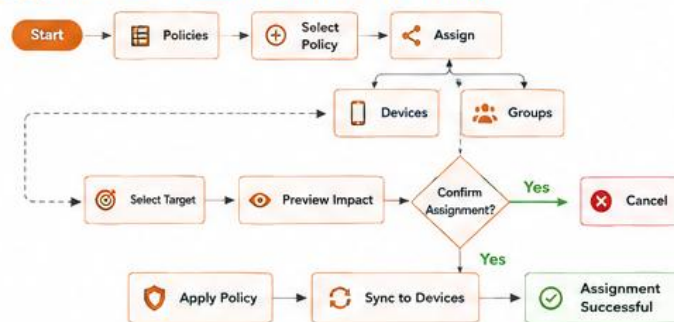

#### TASK FLOW 2: CREATE SECURITY POLICY

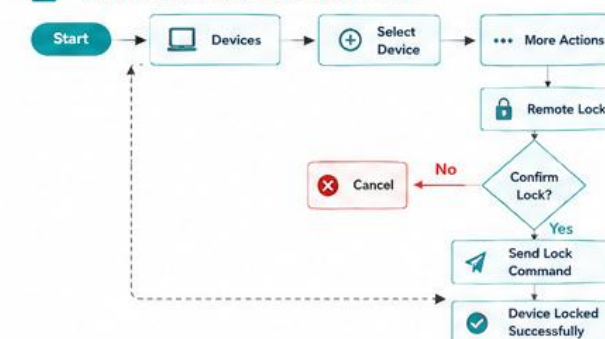

#### TASK FLOW 3: CREATE GEOFENCE

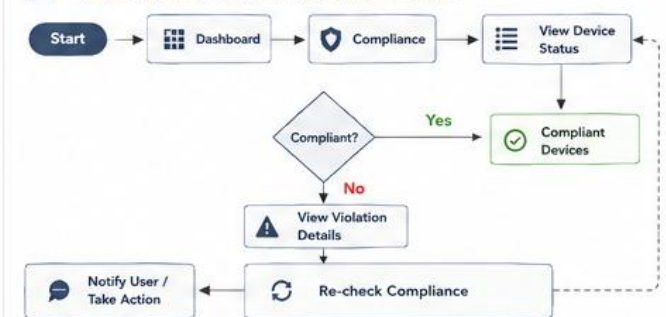

#### TASK FLOW 4: ASSIGN POLICY TO DEVICE GROUP

#### TASK FLOW 5: REMOTE DEVICE LOCK

#### TASK FLOW 6: COMPLIANCE MONITORING

**LEGEND:** Start / End (Blue circle), Process Step (White box), Decision (Diamond), Yes / Success Path (Green line), No / Failure Path (Red line), Return / Loop (Dashed line)

QR code, email invitation, manual, bulk import and automated enrollment.

### Employee UX

Short instructions, visible progress, permission explanations and actionable errors.

### States

Pending → Initiated → In progress → Completed; Failed and Expired are recoverable.

### Admin UX

Enrollment funnel, failure tracking, resend invitation and automatic policy assignment.

## 12 · Geofences

### Create

Name → Search location → Draw radius / polygon → Preview.

### Assign

Users, groups or devices.

### Entry

Apply corporate Wi-Fi, allow required apps or activate location policy.

### Exit

Apply remote-work policy, revoke location access or notify administrators.

### States

Draft, Active and Inactive with visible scope and activity.

## 13 · Lost / Stolen Device Flow

| Step       | Admin experience                    | UX principle                   |
|------------|-------------------------------------|--------------------------------|
| 1 Detect   | Employee report or security alert   | Fast access                    |
| 2 Verify   | Owner, last seen and location       | Context before action          |
| 3 Contain  | Lock and optionally revoke access   | Least destructive first        |
| 4 Escalate | Wipe if sensitive data is at risk   | Explicit impact + confirmation |
| 5 Track    | Show action delivery                | System feedback                |
| 6 Audit    | Actor, timestamp and reason         | Traceability                   |
| 7 Recover  | Mark recovered / retire / re-enroll | Clear lifecycle state          |

Safety pattern: visually separate "Wipe" from routine actions and require explicit confirmation.

## 14 · Dashboard UX

|                                                                                                  |                                                                                                        |
|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| <b>KPI layer</b><br>Managed devices, compliant devices, pending enrollments and security alerts. | <b>Prioritization</b><br>Critical alerts and non-compliant devices above secondary analytics.          |
| <b>Drill-down</b><br>Every metric leads to a filtered list or relevant detail view.              | <b>Analytics</b><br>Compliance trend, platform distribution, enrollment funnel and policy performance. |
| <b>Activity</b><br>Chronological events with actor, object, outcome and timestamp.               |                                                                                                        |

**Dashboard rule:** status → cause → action. A number without a next step creates monitoring, not management.

# 15 · Accessibility

| Area       | Design direction                                                                     |
|------------|--------------------------------------------------------------------------------------|
| Color      | Never rely on color alone; pair status with text/icons and maintain strong contrast. |
| Keyboard   | Logical tab order, visible focus and keyboard-operable controls.                     |
| Typography | Readable body sizes, clear hierarchy and limited all-caps.                           |
| Forms      | Persistent labels, inline validation and descriptive errors.                         |
| Tables     | Clear headers, focus states and meaningful status text.                              |
| Maps       | Provide a non-map alternative for geofence data.                                     |
| Motion     | Respect reduced-motion preferences.                                                  |

## 16 · Usability

|                                                                                             |                                                                    |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| <b>Efficiency</b><br>Saved filters, bulk actions and keyboard-friendly tables.              | <b>Learnability</b><br>Consistent terminology and guided builders. |
| <b>Error prevention</b><br>Preview scope, detect conflicts and confirm destructive actions. | <b>Recovery</b><br>Retry failed operations and preserve input.     |
| <b>Feedback</b><br>Immediate state changes and background progress.                         | <b>Trust</b><br>Audit history, actor, timestamp and scope.         |

## 17 · UX Metrics

| Metric                 | What it measures                 | Illustrative target |
|------------------------|----------------------------------|---------------------|
| Enrollment completion  | Successful enrollment            | +15%                |
| Time to enroll         | Invitation to compliant device   | -30%                |
| Task success           | Core admin tasks without help    | >90%                |
| Time to remediate      | Alert to compliant state         | -25%                |
| Policy error rate      | Failed / conflicting deployments | -20%                |
| Remote action delivery | Lock / wipe delivery             | >98%                |
| Support contacts       | Enrollment/device tickets        | -15%                |
| Accessibility defects  | Critical issues pre-release      | 0 critical          |

Use usability tests, analytics, support-ticket analysis and moderated administrator interviews. Establish a baseline before setting final targets.

## 18 · Enterprise UI Design Direction

|                                                                                                           |                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| <b>Visual style</b><br>Modern enterprise SaaS: restrained, professional, trustworthy and data-dense.      | <b>Layout</b><br>Persistent left navigation, top context bar, breadcrumbs, tabs and strong grid.                 |
| <b>Components</b><br>Tables, filters, cards, drawers, modals, badges, timelines, charts, maps and toasts. | <b>Color semantics</b><br>Blue primary; green healthy; amber warning; red critical; neutral structural surfaces. |
| <b>Density</b><br>Compact but readable tables, clear grouping and progressive disclosure.                 | <b>Responsive</b><br>Desktop-first with tablet adaptation for monitoring and review.                             |
| <b>Design tokens</b><br>Consistent spacing, radius, typography, elevation, borders and semantic states.   |                                                                                                                  |

## 19 · Portfolio Case-Study Structure

| #  | Chapter       | Evidence                                  |
|----|---------------|-------------------------------------------|
| 1  | Hero          | Product statement, role and scope         |
| 2  | Problem       | Business and user problem                 |
| 3  | Context       | Stakeholders, constraints and assumptions |
| 4  | Research      | Methods, findings and evidence            |
| 5  | Personas      | Admin and employee needs                  |
| 6  | Empathy map   | Admin mindset and pain points             |
| 7  | IA            | Structure of the complex domain           |
| 8  | Journey       | End-to-end experience                     |
| 9  | Flows         | User and task flows                       |
| 10 | Wireframes    | Key decisions and iterations              |
| 11 | Visual system | Enterprise UI direction                   |
| 12 | Final UI      | Dashboard + key modules                   |
| 13 | Security      | Lost/stolen device flow                   |
| 14 | Validation    | Usability and accessibility               |
| 15 | Metrics       | Success criteria and measured outcomes    |
| 16 | Reflection    | Trade-offs, learnings and next steps      |

### Final case-study narrative

The strongest story is not a collection of screens. It is a system: administrators observe risk, understand the cause, choose a controlled action, verify the result and leave an auditable trail. Employees receive a simpler enrollment experience while the organization gains scalable security and visibility.
